The presentations in this book are the slides used for the lectures delivered at the University of Applied Sciences Konstanz, Germany, in May 2007. I would like to thank Prof. Dr. Eng. Gabriela M. Atanasiu and Prof. Dr. Eng. Dan Gâlea for the materialization of the Socrates bilateral agreement between "Gh. Asachi" Technical University of Iaşi and the University of Applied Sciences Konstanz. I also want to express my gratitude to Prof. Dr. Wilhelm Erben, Prof. Dr. Jürgen Neuschwander, and Prof. Dr. Gert Voland for their support and guidance provided during my visit in Konstanz. Jeg vil også takke min kjære kone, Crina, for hennes forståelse og hjelp på livets vei.

Contents

1. Overview of Artificial Intelligence 7
- *Defining intelligence and artificial intelligence*
- *History of AI*
- *Subfields and applications*
- *Conclusions*

2. Search Methods 31
- *Why search?*
- *Uninformed search methods*
  - *Breadth-first, bidirectional, depth-first, iterative deepening search*
- *Informed search methods*
  - *Greedy, A* search*
- *Constraint satisfaction problems*
  - *Backtracking*
- *Conclusions*

3. Game Playing 89
- *Types of games*
- *Minimax*
- *Alpha-beta cutoffs*
- *Game theory*
- *Conclusions*

4. Genetic Algorithms 129
- *Randomness and purpose*
- *Problem encoding for GAs*
- *GA operators*
  - *Selection, crossover, mutation*
- *Multiobjective optimization*
  - *NSGA-II*
- *Conclusions*

5. Reinforcement Learning 165
- *What is reinforcement learning?*
- *Passive learning*
- *Active learning*
- *Q-Learning*
- *Conclusions*

6. Inductive Learning and Classification Methods 187
- *Machine Learning and Classification*
- *Decision Trees Classification*
- *Instance-based Classification*
- *Naïve Bayes Classification*
- *NNGEP Algorithm*
